

INTERIM Tagging Protocol for Transactions through Hot Springs

Please Note: There is not an "Interim" tagging protocol when AVAT is a transmission provider for schedules using Hot Springs as a POR/POD. A change to these tag templates will not be necessary.

Effective April 1, 2009 and continuing through May 31, 2009, Avista, Bonneville, Idaho Power, NorthWestern and PacifiCorp are implementing an INTERIM tagging protocol for transactions scheduled through the Hot Springs POR/POD. Please refer to the tagging examples as seen below for this interim tagging approach. This tagging protocol is being employed on a temporary basis to facilitate compliance with applicable reliability standards prior to implementation of a more comprehensive series of capacity management procedures. **Therefore, tag authors need to adjust their templates using the structure identified in the above referenced tagging examples. Such tags will need to be submitted on a Preschedule basis on March 31, 2009 for flow on April 1, 2009.**

Effective June 1, 2009, Avista, Bonneville, Idaho Power, NorthWestern and PacifiCorp have agreed to implement new capacity management procedures associated with the use of the Hot Springs POR/POD, the Amps Line, and the Montana-to-Northwest Path. Materials regarding these capacity management procedures and associated tagging protocols, including tagging examples, are being developed and will be provided for review prior to implementation.

Tagging Example -- North AMPS HTSP to BRDY Sold by PAC

Physical Path						
CA	TP	PSE	POR	POD	Sched Entities	Contract
	BPAT	"-----"	"-----"	HTSP.AVA	BPAT	BPAT TSR
	BPAT	"-----"	HTSP.AVA	HTSP	AVA	BPAT (SERVICE-NOR)
	NWMT	"-----"	HTSP	BRDY	NWMT	724
