

Yuma Area Considerations

Winter Time Load Resources Expected

APS Yuma area owned generation supplied must be between 60-90MW to maintain system reliability.

With Hassayampa – NG500 Out of Service

When the load in Yuma is between 220MW and 250MW, APS Yuma area owned generation supplied must be increased, regardless of any in-load center generation purchases, to maintain system reliability.

With WALC Gila 69 Station - Out of Service

When the load in Yuma is between 180MW and 210MW, APS Yuma area owned generation supplied must be increased, regardless of any in-load center generation purchases, to maintain system reliability.
