Re: Entergy Services, Inc.; Docket No. ER05-1065-000
 Report of AFC Related Error

Dear Secretary Bose:

Pursuant to the Federal Energy Regulatory Commission's ("Commission") April 24, 2006 Order in *Entergy Services, Inc.*, 115 FERC ¶ 61,095 (2006) ("April 24 Order"), Entergy Services, Inc., acting as agent for the Entergy Operating Companies,¹ hereby notifies the Commission it has recently become aware of an OASIS Automation ("OA") issue involving the evaluation of limiting flowgates for certain transfer paths in the Study Horizon.

In the April 24 Order, the Commission conditionally accepted Entergy's proposal to establish an Independent Coordinator of Transmission ("ICT") for the Entergy System. As the Commission is aware, the Southwest Power Pool, Inc. acts as Entergy's ICT. In the April 24 Order, the Commission imposed an obligation for Entergy to "notify the Commission, the ICT and the Users Group within 15 days if Entergy discovers that it has lost data, or reported inaccurate data, or otherwise believes that it has mismanaged data." *See* April 24 Order at P 110. Accordingly, Entergy submits the following explanation of a recently discovered issue involving the evaluation of limiting flowgates for certain transfer paths in the Study Horizon.

¹ The Entergy Operating Companies include: Entergy Arkansas, Inc., Entergy Gulf States Louisiana, LLC, Entergy Louisiana, LLC, Entergy Mississippi, Inc., Entergy New Orleans, Inc., and Entergy Texas, Inc. The Entergy Operating Companies and Entergy Services, Inc. are referred to collectively herein as "Entergy."

Most Limiting Flowgate Determinations in the Study Horizon

During a routine quality assurance test on March 27, 2008, Entergy ascertained that since September 2007, a limited subset of Transmission Service Requests (“TSRs”) in the Study Horizon with a Point of Delivery (“POD”) of AMRN or AECI may have been evaluated considering one more limiting flowgate than is standard operating procedure. This unintended consequence stemmed from a software change to the PAAC application that was delivered by Entergy’s software vendor, PowerGem, to implement the AMRN/AECI combination proxy flowgate several months ago.

Base flows and response factors of significantly impacted flowgates for every transfer path are calculated during each monthly/weekly update of the Study Horizon. As many as fifteen significantly impacted flowgates are intended to be identified during re-synchronization for each transfer path. This limited set of up to fifteen flowgates, as opposed to the entire flowgate list, is then used by OASIS Automation to evaluate individual TSRs.

Since September 2007, some TSRs with a POD of AMRN or AECI may have been evaluated considering as many as sixteen, rather than fifteen, significantly impacted flowgates in the Study Horizon. TSRs with the six following Point of Receipt (“POR”)/POD combinations may have been evaluated with up to sixteen flowgates: Ruston/AECI, Batesville3/AMRN, Batesville3/AECI, Choctaw/AMRN, Choctaw/AECI, and Ackerman/AECI.

Entergy’s software vendor delivered a corrected version of the PAAC application on April 8, 2008. This software was tested and will be used in the preparation of the next Study Horizon re-synchronization. System reliability was not affected by the consideration of an additional limiting flowgate.

Respectfully submitted,

/s/ Floyd L. Norton, IV
