

Proposed Transition of Long-Term Transmission Service Requests Processing from SPP to MISO

This document describes the procedures for the December 1st 2012 transfer of ICT responsibilities for processing Long-Term TSR OASIS requests, and performing and processing System Impact Studies (SIS), and Facilities Studies (FS).

Initial Processing of Long-Term Transmission Service Requests Submitted on OASIS

For all Entergy OASIS Long-Term Transmission Service requests submitted prior to December 1, 2012, SPP shall perform the initial evaluation to determine if a study is required. MISO shall perform this evaluation for all Entergy OASIS Long-Term Transmission Service Requests submitted on or after December 1, 2012.

System Impact Study

SPP shall complete all Long-Term TSR studies with System Impact Study Agreements (SISA) executed and returned to the ICT by the customer (*i.e.*, received by SPP) prior to the ICT transition date. For those SISA completed and returned to the ICT by the customer prior to the ICT transition date, but the SIS is due to be posted after the ICT transition date, SPP shall retain study responsibility, in coordination with MISO. Following the completion and posting of the System Impact Study Report (SISR), the request will transition to MISO for subsequent processing. MISO shall complete all Long-Term TSR studies where the SISA has been executed and returned by the customer on or after ICT transition date.

Facilities Study

SPP shall direct Entergy to perform all Facilities Studies that have Facilities Study Agreements (FSA) that are executed and returned to the ICT by the customer (*i.e.*, received by SPP) prior to the transition date. For those FSAs completed and returned to the ICT by the customer prior to the ICT transition date, but the FSR is due to be posted after the ICT transition date, SPP shall continue to have study completion, validation, and posting responsibilities in coordination with MISO.

MISO shall direct Entergy to perform all Facilities Studies that have a FSA executed and returned by the customer on or after the ICT transition date, and shall assume responsibility for study completion, validation, and posting.
