Executive Management

Position	Job Description
President and CEO	Provides leadership and direction to the corporation in two strategic areas that include Power Delivery and Finance and Administration.
Sr. VP, Transmission Policy	Provides leadership and direction for the management of transmission policy issues, including representation, discussions and negotiations for the Corporation and its involvement with FERC.
VP, System Planning	Provides leadership and direction for the management of issues related to system planning, business strategy and regulatory affairs within three functional areas: Bulk System Planning, Project Planning Services, and System Services.
VP, Operations & Maintenance	Provides leadership and direction for the management of issues related to substation, transmission line and electronic maintenance activities. Provide oversight of O&M contracts and support for discussions related to the continuation of the Integrated Transmission System.

System Services / Interconnection Services Department

Position	Job Description
Manager, System Services	Manages overall efforts in Tariff Administration and Contract Administration with respect to, but not limited to, transmission service requests, generation interconnection contracts, transmission interface, and NERC/SERC compliance.
Interconnection Services Manager	Manages and coordinates Generation Interconnection activities within GTC, including Generation Interconnect application requests, contracts and agreements
Transmission Strategic Coordinator	Manages and coordinates activities within GTC regarding Integrated Transmission System procedures, policies, and changes to these documents. Responsible for the administration and negotiation, as needed, of Interconnection and Operation Agreements, Network and Point-To-Point Transmission Service requests, and other contracts as assigned. Keeps current on transmission issues and provides support to GTC in regards to NERC, SERC, FERC and other related areas of interest. Represents GTC on industry committees. Leads efforts of other team members.
Senior System Services Engineer	Apply, develop and interpret GTC Transmission Tariff, Transmission Service Agreements and other customer contracts. Serves as contact for both internal and external customers on related tariff matters.
Contracts Specialist	Support the overall aspects of the Tariff Administration functions. Responsible for customer's deposits for services and studies, access to OASIS, new customer accounts and reviewing third party billings.

Bulk System Planning Department

Position	Job Description
Manager, Bulk System Planning	Responsible for management of bulk transmission system planning, generation interconnection planning, planning for transmission interface, and NERC/SERC compliance.
Group Lead, Bulk System Planning	Provides a lead role in the Bulk System Planning activities of the Corporation by providing work direction and review of projects associated with GTC's transmission interests.

Operations and Maintenance

Position	Job Description
Manager, Substation Maintenance	Manage the substation maintenance program and the substation commissioning function for Georgia Transmission Corporation.
Manager, Transmission Line Maintenance	Provides leadership and tactical direction for the transmission line operations and maintenance program of the Corporation.
Manager, Electronics Maintenance	Provides leadership and tactical direction for the operations and maintenance of the SCADA, revenue metering, and telecommunication systems that support the day-to-day operations of the Corporations' transmission infrastructure.

Technical

Manager, Relay and Controls Design	Manages the Relay and Controls Design Department including giving work direction and the review of work products associated with relay and control activities related to the Corporation's interests.
Manager, Systems Protection	Manages the Systems Protection Department including giving work direction and the review of work products associated with system protection activities related to the Corporation's interests.
Manager, System Reliability	Manages the System Reliability Department including giving work direction and the review of work products associated with system reliability and control activities related to the Corporation's interests.
