Idaho Power Transmission Business Practices

Section 5 – Rollover Rights for Network and Long-Term Firm PTP Service

Effective Date: July 3, 2014 06:00 PPT

In this section

5.1 Overview 1
5.2 Evaluation of Initial Requests 1
5.3 Rollover Request 2
5.4 Competing Request 2
5.5 Competing Process 2

5.1 Overview

Pursuant to Section 2.2 of the Tariff, Network Customers and LTF PTP customers with contracts of five years or longer have a right to roll over their service for any number of years provided that:

- Idaho Power determines at the time of the initial request that there is sufficient capacity available to accommodate the request beyond the term of the initial service request as described in Section 5.2.
- The Rollover Request is considered as a new service request with the exception that (a) a rollover request does not need to be studied in the same manner as a new request, and (b) the customer requesting to roll over existing service has the Right of First Refusal ("ROFR") in the event of a competing request.
- The Rollover Request customer accepts a reservation term for the rollover at least equal to the longer of a competing request by a new customer or five years.

5.2 Evaluation of Initial Requests

When a customer requests LTF PTP transmission service, Idaho Power will evaluate the request for periods beyond the stop time of the request to determine if rollover

will be available for future periods based on existing long-term firm commitments. If this evaluation determines that insufficient capacity is available to accommodate the request in potential future rollover periods, the Service Agreement will stipulate that the customer will not be permitted to rollover its service beyond the period where sufficient capacity exists.

5.3 Rollover Request

The customer requesting to roll over existing service must submit a Rollover Request on OASIS pursuant to Section 17.1 of the Tariff. The Rollover Request must be received by Idaho Power no less than one (1) year prior to the date on which the reservation expires, rolls over, or is renewed.

5.4 Competing Request

A new request for LTF PTP service submitted on OASIS to Idaho Power by an eligible customer is considered a competing request for the same capacity with the rollover request if:

(a) the new request has the same start time as the rollover request and extends beyond the stop time of the rollover request;

(b) the new request is submitted prior to the deadline for submitting the rollover request; and

(c) there is insufficient ATC to accommodate both the new request and the rollover request.

5.5 Competing Process

(a) Upon deeming an application for a rollover request complete, Idaho Power will notify the rollover request customer via a letter that the rollover request is accepted on the condition that the rollover request customer may be required to match on term to any competing request. Action to the OASIS request will occur during the process described in 5.5(e) below.

(b) Idaho Power will identify all competing requests and establish their competing priority. The competing priority determines the sequence of competing requests, whose terms the rollover request has to match and is established according to their length of service queue priority.

(d) Idaho Power will start the competing process as soon as practicable.

(e) Idaho Power will follow the competition process as outlined in Business Practice Section 9 – OASIS TSR Processing Procedures.
