

Idaho Power Transmission Business Practices

Section 5 – Rollover Rights for Network and Long-Term Firm PTP Service

Effective Date: 1400 PPT, July 13, 2007

In this section

5.1	Overview	1
5.2	Evaluation of Initial Requests.....	1
5.3	Rollover Request	2
5.4	Competing Request.....	2
5.5	Competing Process.....	2

5.1 Overview

Pursuant to Section 2.2 of the Tariff, Network Customers and LTF PTP customers with contracts of five years or longer have a right to roll over their service for any number of years provided that:

- Idaho Power determines at the time of the initial request that there is sufficient capacity available to accommodate the request beyond the term of the initial service request as described in Section 5.2.
- The Rollover Request is considered as a new service request with the exception that (a) a rollover request does not need to be studied in the same manner as a new request, and (b) the customer requesting to roll over existing service has the Right of First Refusal (“ROFR”) in the event of a competing request.
- The Rollover Request customer accepts a reservation term for the rollover at least equal to the longer of a competing request by a new customer or five years.

5.2 Evaluation of Initial Requests

When a customer requests LTF PTP transmission service, Idaho Power will evaluate the request for periods beyond the stop time of the request to determine if rollover will be available for future periods based on existing long-term firm commitments. If this evaluation determines that insufficient capacity is available to accommodate the request in potential future rollover periods, the Service Agreement will stipulate that

the customer will not be permitted to rollover its service beyond the period where sufficient capacity exists.

5.3 Rollover Request

The customer requesting to roll over existing service must submit a Rollover Request on OASIS pursuant to Section 17.1 of the Tariff. The Rollover Request must be received by Idaho Power no less than one (1) year prior to the date on which the reservation expires, rolls over, or is renewed.

5.4 Competing Request

A new request for LTF PTP service submitted on OASIS to Idaho Power by an eligible customer is considered a competing request for the same capacity with the rollover request if:

- (a) the new request has the same start time as the rollover request and extends beyond the stop time of the rollover request;
- (b) the new request is submitted prior to the deadline for submitting the rollover request; and
- (c) there is insufficient ATC to accommodate both the new request and the rollover request.

5.5 Competing Process

- (a) Upon deeming an application for a rollover request complete, Idaho Power will notify the rollover request customer via a letter that the rollover request is accepted on the condition that the rollover request customer may be required to match on term to any competing request. Action to the OASIS request will occur during the process described in 5.5(e) below.
- (b) Idaho Power will identify all competing requests and establish their competing priority. The competing priority determines the sequence of competing requests, whose terms the rollover request has to match and is established according to their length of service queue priority.
- (c) Idaho Power will post rollover requests and competing requests with their competing priority under the Customer Service - Transmission folder of the Idaho Power OASIS website.
- (d) Idaho Power will start the competing process as soon as practicable. Idaho Power shall notify rollover request customer(s) and competing request customer(s) of the date the competing process begins.

- (e) Idaho Power will process the rollover and competing requests as a group on OASIS as follows:
- (1) Idaho Power will change the status of the rollover customer's request on OASIS to "COUNTEROFFER". The comment section of the OASIS counter-offer for the rollover request will contain the following conditions:
 - (i) MW amount is not less than the capacity held currently;
 - (ii) Agreement to match the longest duration request in the competing request queue.
 - (2) Idaho Power will change the status of each competing customer's request to "COUNTEROFFER" on OASIS. The comment section of the OASIS counter-offer for competing requests will contain the following conditions:
 - (i) MW amount is not less than the capacity held by the existing rollover request customer;
 - (ii) rollover request does not exercise its ROFR; and
 - (iii) Competing request customer(s) with higher priority does not "CONFIRM" the OASIS request.
 - (3) Competing and rollover request customers shall confirm the acceptance of the counteroffer within 15 Calendar Days¹ by "CONFIRMING" the OASIS reservation. If a competing or rollover request customer does not confirm the counteroffer within the specified time period, Idaho Power will consider that the competing request customer has refused the counteroffer and remove the competing request from the competing process by "RETRACTING" the OASIS counteroffer.
 - (4) The rollover customer may submit a matching request at any time during the competing process. A matching request is a new request that has the same attributes of the initial rollover request, except with a term matching that of the longest term competing request and that has been PRECONFIRMED.
 - (5) Once all counteroffers are acted upon, Idaho Power will within one (1) Business Day notify the rollover request customer of a required match to the competing request via email. The rollover request customer must submit on OASIS a rollover matching request within three (3) Business Days² after notification is made (see Section 5.5 (e) (4) for matching request criteria). The original request will be annulled and the matching request will be

¹ Section 001-4.13, Table 4-2 of FERC's Business Practice Standards for OASIS Transaction adopted in Order No. 638 and remains the same in Order No. 676.

“ACCEPTED”. The rollover request customer will be required to execute a Service Agreement for the rollover matching request.

- (6) If the rollover request customer does not submit a rollover matching request within the specified time period, Idaho Power Company will grant the capacity held for the rollover request customer to the highest priority competing request still in the queue. The competing request customer will be required to execute a Service Agreement for the capacity granted.
- (7) Once the capacity is granted to either the rollover request customer or the highest competing request, all other requests in the competing queue will be “ANNULLED”.
- (f) If there is more than one rollover request, then Idaho Power will subject the rollover requests to competition based on the time the rollover request is submitted (i.e., the rollover request submitted last in time is the first to be asked to match a new competing request).
- (g) A LTF PTP customer with redirected service on a non-firm basis can only request to roll over the firm service as specified in its Service Agreement.
