March 21st, 2011

Name/Address

Dear …:

As mentioned in my February 22nd letter, OPPD has been directed by its Board of Directors to withdraw its facilities from Southwest Power Pool's transmission tariff and to prepare a modified FERC *pro forma* Open Access Transmission Tariff (OATT). The link below accesses OPPD's proposed OATT that will be up for review and action by the OPPD Board of Directors during the regularly scheduled April 14th Board meeting.

http://www.oatioasis.com/OPPD/OPPDdocs/2011_OPPD_OATT_Proposed.pdf

The proposed OPPD OATT effective date will commensurate with the date of the actual SPP operational change, which is now expected to occur August 1st, 2011 at the earliest.

Existing transmission rates approved by the Board in Resolution No. 5781 are proposed to remain unchanged; however, the proposed OATT incorporates new FERC pro-forma tariff methodologies for energy and generation imbalance services.

In the next few months, OPPD will post on its OASIS a document detailing the transition of existing Transmission Service Requests to OPPD's OATT and any additional transmission administrative details related to new and grandfathered requests.

If you have any questions, please direct them to me at 402-552-5181 or if you would like an electronic version of OPPD's proposed OATT, please email me at dpeterchuck@oppd.com.

Thank you,

Doug Peterchuck, P.E.
