

Notice: PGE to Rename Point of Delivery on Posted Paths at Colstrip

Posted: May 6, 2009

Effective today the **Colstrip to Townsend** transmission path will be renamed to become the **Colstrip to Garrison** path. Likewise the **Broadview to Townsend** path will be renamed to become the **Broadview to Garrison** path. The process to do this involves posting both pairs of old and new path names for a period of time to allow for the transfer of all reservations to the renamed paths. The new path names will begin to be used on June 1, 2009. At that time the old path names will be deactivated.

The Point-of-Delivery (POD) of Garrison is already used on e-tags as the POD of the two paths that terminate at Townsend. This was possible because PGE has treated the point "Townsend" to be equivalent as the point "Garrison" for scheduling purposes. This change will enable the POD listed on OASIS to be the same POD as listed on the e-tag. The TTC of both paths has a maximum value of 280 MW. All reservations, obligations, rights and requirements of the original paths are transferrable to the new paths. Presently the paths are fully transcribed on a firm basis and will remain so with the renaming of the paths.

PGE Transmission appreciates your understanding and patience during this transition. Please contact Matt Richard, Transmission Operations Specialist, at 503-464-4243 if you have any questions.
