

Transmission Pricing - Energy and Generator Imbalances

Posted: September 8, 2008

Effective: September 8, 2008

Revision No.: 0

Requirement

Order No. 890-A allowed a transmission provider to post on its OASIS the maximum amount of generator imbalance service it is able to offer without impairing reliability. In Order No. 890-B P.41, FERC clarifies that, to the extent necessary, a transmission provider must post the availability of generator imbalance service and seek imbalance service from other sources in a manner that is reasonable in light of the transmission provider's operations and the needs of its imbalance customers.

Statement of Compliance

Portland General Electric (PGE) has sufficient generator imbalance service to meet the needs of its current customers. PGE would need to evaluate the generator imbalance service capacity for new customers on a case by case basis.
