

## Transmission Request Status Values

The following list describes status values for OASIS transmission requests:

**QUEUED** = initial status assigned by OASIS on receipt of the request.

**RECEIVED** = assigned by PNM to acknowledge QUEUED requests.

**INVALID** = assigned by PNM indicating that the request was not submitted correctly - those that are submitted with incorrect POR, POD, or Path Name; are submitted outside the request submission timelines; or are submitted without a capacity value or price bid (final state).

**STUDY** = assigned by PNM to indicate some level of study is required or being performed to evaluate the request.

**REFUSED** = assigned by PNM to indicate service request has been denied due to availability of transmission capability (final state).

**COUNTEROFFER** = assigned by PNM to indicate that a new OFFER\_PRICE is being proposed.

**REBID** = assigned by Customer to indicate that a new BID\_PRICE is being proposed.

**SUPERSEDED** = assigned by PNM when a request which has not yet been confirmed is displaced by a higher priority reservation (final state)

**ACCEPTED** = assigned by PNM to indicate the service request has been approved/accepted. If the reservation request was submitted PRECONFIRMED, the OASIS will immediately set the reservation status to CONFIRMED.

**DECLINED** = assigned by PNM to indicate that the BID\_PRICE is unacceptable and that negotiations are terminated (final state).

**CONFIRMED** = assigned by Customer, in response to PNM posting "ACCEPTED" status, to confirm service. Once a request has been "CONFIRMED", a transmission service reservation exists (final state, unless overridden by DISPLACED or ANNULLED).

**WITHDRAWN** = assigned by Customer at any point in request evaluation to withdraw the request from any further action (final state).

**DISPLACED** = assigned by PNM when a "CONFIRMED" reservation from a Customer is displaced by a longer-term reservation and the Customer has exercised right of first refusal (i.e. refused to match terms of new request) (final state).

**ANNULLED** = assigned by PNM at the request of the customer when the customer has made a mistake with POR, POD, date, time, and/or product. By mutual agreement, a confirmed reservation is to be voided (final state) and the transmission customer will resubmit a transmission request with the corrected information. The Annulled state will not be allowed when there is a competing request for the same transmission path or after the transmission request start time has commenced.

**RETRACTED** = assigned by PNM when the Customer fails to confirm or withdraw the request within the required time period (final state).
