

Puget Sound Energy (PSEI) posts two OASIS paths referred to as Johnday-COB and COB-Johnday. These paths represent PSEI contractual share of the Pacific AC Intertie maintained and operated by Bonneville Power Administration's Transmission Services (BPAT). As the transmission operator, BPAT is responsible for determining the Operational Transfer Capability (OTC) for the northern portion of the Intertie (BPAT coordinates OTC with the southern path operators, California ISO and Sacramento Municipal Utility District).

PSEI's percentage share of the Pacific AC Intertie north-to-south and south-to-north is set by contract and reflected in the posted TTC for Johnday-COB and COB-Johnday paths, respectively.

From time-to-time, BPAT will inform PSEI of revised Intertie OTCs. PSEI to the best of its ability updates the corresponding TTCs to reflect these OTC changes. The exact reason for a change in TTC on these paths should be found on the BPAT OASIS web site.
