**SUBJECT:** Network Integration Transmission Service on OASIS
FERC Order 676-H, Network Service on OASIS & Transmittal of Existing Network Information

Dear Network Customer,

The purpose of this communication is to inform our Network Customers of their specific data requirements required to be placed on their PSEI NITS application on OASIS when it comes time to submit that information early next year. As you may know, last year FERC issued Order No. 676-H to modify the latest version of the Standard for Business Practices and Communication Protocols. These new and revised standards include modifications to support FERC Order Nos. 890, 890-A, 890-B and 890-C, including the standards to support Network Integration Transmission Service (NITS) on an Open Access Same-Time Information System (OASIS). Network transmission service enables network customers to use their generation resources to serve their network loads. Network customers also can use the service to deliver economy energy purchases to their network loads.

As part of this transition, many manual activities performed today will be transitioned to be performed online on Puget Sound Energy's (PSE's) OASIS website. As an initial step PSE is forwarding the information which is available today regarding your existing network service. The data specific information attached is not new and contains a portion of the information on the new NITS on OASIS templates representing the current network service arrangements. The transition to the NITS on OASIS method will begin in February 2016 with demo submissions. Submissions in the production environment will begin in March 2016, completing before the required implementation date of April 25, 2016. It is our plan to perform these transitions with one-on-one training and assistance as needed or requested.

Existing NITS Technical Data

Attached for your review is the existing NITS technical data that PSE has to date on your designated network resource(s) and load(s). Please review the attached and reply back to PSE if the data provided requires any changes or modifications as the actual data templates have not yet been finalized and the technical data that is loaded into the new NITS on OASIS site needs to be as accurate as possible. PSE may be missing some required data for your designated network resource(s) and/or load(s) and may be in contact with you soon to discuss gathering the missing data.

PSE is will be available to engage in informal communications to resolve any issues with this information. We will be in contact with you in the near future to discuss the next steps of this transition to the online NITS on OASIS system. If you have any questions on these issues, please feel free to contact either of the following individuals:

Chelsey Neil, Supervisor Transmission Services
(425) 462-2479
Chelsey.neil@pse.com

Laura Hatfield, Contract Manager Transmission Policy & Contracts
(425) 462-3921
laura.hatfield@pse.com

Sincerely,

Josh Jacobs
Director Load Serving Operations
