

8/1/2008

On July 28, 2008, PSE discovered that PSE's energy affiliate had inadvertently been provided access to certain non-public transmission information. The information was inadvertently available via PSE's accounting system, SAP, and contained third-party transmission billing information. PSE was not able to ascertain by whom or when, if ever, the information may have been accessed. Once discovered, immediate actions were taken to address the problem and correct the security error. In addition, the PSE IT Department is taking steps to ensure that merchant employees are given the appropriate level of access. Please contact Tom DeBoer at [tom.deboer@pse.com](mailto:tom.deboer@pse.com) for any additional information.
