

Marketing Function Positions

Department	Position	Function Description
Power Trading	General Manager	Responsible for directing and managing all short-term and long-term trading activities.
Power Trading	Power Trading Real-Time Senior Manager	Supervision of real-time traders. Training new traders and coordination of shift schedules. Responsible for planning and advising senior managers concerning all power trading activities.
Power Trading	<ul style="list-style-type: none"> • Senior Trader • Trader 	Responsible for the purchases and sales of power on the spot market required to meet load or optimize financial performance of generating resources. Mid-Term Desk traders handle daily, weekly, and monthly transactions. Real-Time Traders handle hourly transactions in the spot market.
Power Trading	<ul style="list-style-type: none"> • Market Optimization Senior Program Manager • Energy Marketing Strategist 	Responsible for developing strategies and process improvements for purchases and sales of power in the wholesale market required to meet projected load.

Transmission Function Positions

Department	Position	Function Description
Transmission, Transmission Engineering	Senior Manager, Project Services	Provides project management, project control support for transmission and telecommunication systems, engineering, and construction activities.
Transmission, Transmission Engineering	<ul style="list-style-type: none"> • Senior Project Manager, Project Services • Project Manager, Project Services 	Provides technical and overall management of transmission and telecommunication systems construction projects. Has access to transmission performance and reliability information.
Transmission, Transmission Engineering	Manager, Project Development	Responsible for scheduling and financial cost oversight of transmission and telecommunications system construction activities. Responsible for scope, cost, and schedule development for facilities studies for transmission service and interconnections.

Transmission Function Positions

Department	Position	Function Description
Transmission, Transmission Engineering	Specialist, Project Control	Provides scheduling and support to transmission and telecommunications system construction activities, as well as project scoping facilitation.
Transmission, Transmission Operations & Power Supply	Manager, Stakeholder Services & Contracts	Manages and directs the provision of services to qualified market participants via applicable transmission service and interconnection service agreements.
Transmission, Transmission Operations & Power Supply	<ul style="list-style-type: none"> • Senior Program Manager, Interregional Operations • Program Manager, Stakeholder Services & Contracts 	Responsible for developing and negotiating contracts for interconnection services.
Transmission, Transmission Operations & Power Supply	<ul style="list-style-type: none"> • Senior Program Manager, Transmission Services • Specialist, Transmission Services 	Receives requests for and coordinates processing for transmission service requests.
Transmission, Transmission Operations & Power Supply	General Manager, Transmission Operations, Reliability, & SCADA	Oversees group responsible for maintaining configuration control over the TVA transmission grid, real-time operations of transmission assets, and response to emergency transmission outages
Transmission, Transmission Operations & Power Supply	Manager, Transmission Operations	Responsible for all decisions regarding dispatch of the transmission system including switching, caution orders, hold orders, restoration, and monitoring of the transmission system.
Transmission, Transmission Operations & Power Supply	Transmission System Operator I, II, III	Coordinates and oversees operation of the transmission system for a region within the TVA transmission area.
Transmission, Transmission Operations & Power Supply	Senior Manager, Reliability Authority & Regional Operations	Responsible for transmission system security, commercial transmission and interconnection services, and regulatory policy.

Transmission Function Positions

Department	Position	Function Description
Transmission, Transmission Operations & Power Supply	Manager, Reliability Analysis	Manages the AFC modeling process in support of the Reliability Coordination function. Manages the scheduling and optimization of the transmission outage process.
Transmission, Transmission Operations & Power Supply	<ul style="list-style-type: none"> • Electrical Engineer Planning • Specialist, Power System Engineering • Specialist, Nuclear Offsite 	Responsible for calculation of AFC flows and special studies. Coordinates transmission maintenance outages. Develops transmission security tools.
Transmission, Transmission Operations & Power Supply	Manager, Reliability Operations	Coordinates activities impacting NERC and SERC transmission system security, and regional transmission coordination.
Transmission, Transmission Operations & Power Supply	Specialist, Reliability Analysis & Operations	Develops operating reliability limits and performs reliability analysis for the Reliability Authority area. Provides oversight of transmission and generation operational plans and directs revisions as required.
Transmission, Transmission Operations & Power Supply	<ul style="list-style-type: none"> • Senior Reliability Coordination System Operator • Specialist, Reliability Coordination System Operator 	Monitors all reliability related data within the reliability Authority area, directs appropriate entities to relieve reliability threats and violations, and enforces operational reliability requirements.
Transmission, Transmission Operations & Power Supply	Manager, Transmission & Interchange Services	Oversees the activities of the system operators in the Transmission Provider and Interchange area.
Transmission, Transmission Operations & Power Supply	<ul style="list-style-type: none"> • Senior Specialist, Senior Transmission & Interchange Services System Operator • Specialist, Transmission & Interchange System Services Operator 	Provides functional direction and policy in the development of transmission service and OASIS administration. Conducts special studies and analyses for developing alternative approaches to enhance transmission performance.
