

### **Info for Users of non-OATI Tagging Vendors**

The current public key for tagging encryption in Physical Scheduling System (PSS) will expire on January 30, 2007. **All non-OATI tagging vendors** will need to acquire the new public key from Midwest ISO prior to this expiration date. In addition to applying the new public key, the **MisoMarketCertID** of the MISO Market information must be updated from "2" to "3".

If you use a **non-OATI tagging vendor**, please have your tagging vendor contact the Midwest ISO Network Operations Center (NOC) at 317-249-5555 and indicate that they need to receive the new public key for tagging encryption. The NOC representative will route the call appropriately.

**Please note: all companies using OATI as their tagging vendor will not be affected by this change.**
