

On **Monday April 15, 2013**, MISO will be migrating to the OATI webOASIS platform. In order for this change to take place there will be a **scheduled four hour outage on this date from 1400 – 1800 EST**. During the outage, MISO will follow it's normal OASIS outage procedure. MISO will allow hourly E-tags referencing "TBD" as the MISO TSR.

For hourly transmission service requests for operating date April 16, 2013, MISO will open the window at 1100 EST instead of the normal 1300 EST. This will allow customers two additional hours to submit transmission requests prior to the planned outage.

After the outage, when MISO is live with the OATI webOASIS, only TSRs with an active date of March 1, 2013 and beyond will be available. For an archive of TSRs that have ended prior to March 1, 2013, customers can query the original MISO OASIS up to 90 days after the cutover.

MISO will send out an email every business day until the system is live with additional information. Please ensure that this communication is monitored.

Please send any questions to PSSOASIS@misoenergy.org.
