

MISO continues its schedule to migrate to OATI webOASIS on **Monday April 15, 2013** with a scheduled outage from 1400 – 1800 EST to accommodate the system transitions. MISO Customers were granted access to OATI's webOASIS on Thursday April 11, 2013 to verify access. If a MISO Transmission Customer has not taken the chance to log into webOASIS to verify access, please do so at this time.

MISO has scheduled a four hour outage that will only impact the submission on hourly TSR's and retrieving ATC values from the System Data Template. MISO and OATI intend to complete its work and to end the outage in less than four hours. A communication will be sent out as soon as MISO is ready for customers to submit transmission service request on the new OATI webOASIS.

[Attached](#), customers can find a brief power point providing further explanation on Network Integration Service (NITS) during the interim of MISO transition to OATI's NITS on OASIS module.

MISO will send out an email every business day until the system is live with additional information. Please ensure that this communication is monitored.

Please send any questions to PSSOASIS@misoenergy.org.
